

Team Project Check-In 4

Final Prototype + Future Evaluation Plan

AI Student Handbook Study

by Groupmates: Joe, Basco, Victor

May 2026

Presenting our high-fidelity interactive AI handbook that connects directly with real student handbook data, alongside our evaluation updates.

Final Prototype

Compared to our previous iteration, we focused on making specific but highly impactful optimizations to our design, mainly by strengthening the prototype's connection with actual AI capabilities.

We successfully linked the AI engine to the interface so that it can now interact with users in real-time. When a user types in a question, the AI reads the uploaded student handbook data to deliver accurate, highly detailed, and specific answers. In addition to the backend AI connection, we polished the user interface to make the prototype much cleaner, easier to read, and more intuitive to operate.

Prototype Development

The first image (Figure 1) shows the homepage of our initial prototype, which directs users to use AI instructions for their searches. The second image (Figure 2) demonstrates our enhanced version where we integrated an AI assistant to help direct users and guide them to the content they want based on the family handbook.

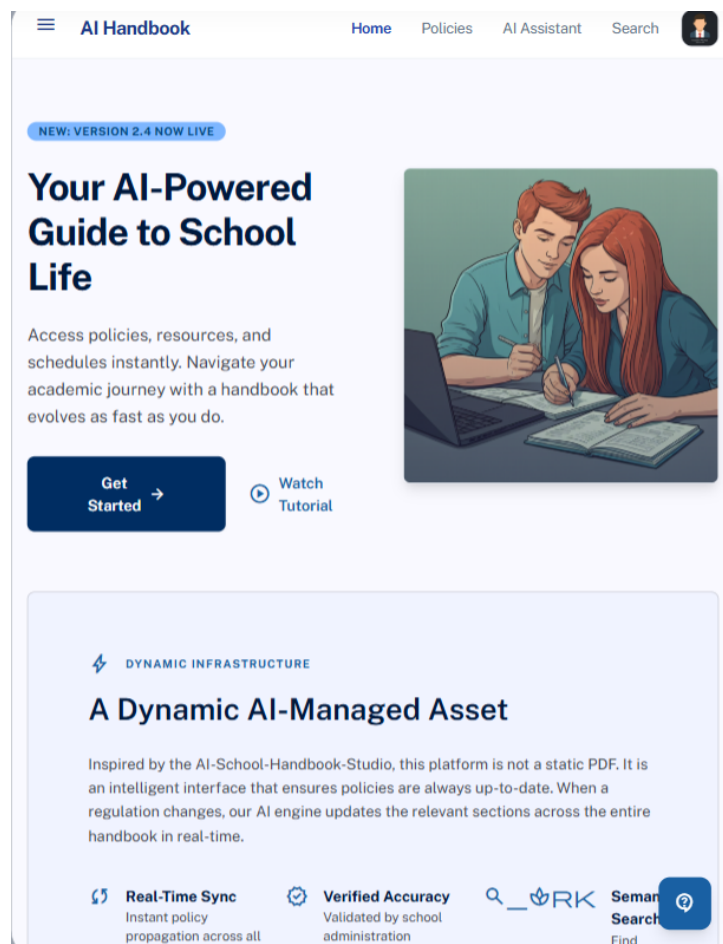

Figure 1: Homepage of initial prototype - Directs users to use AI instructions for their searches.

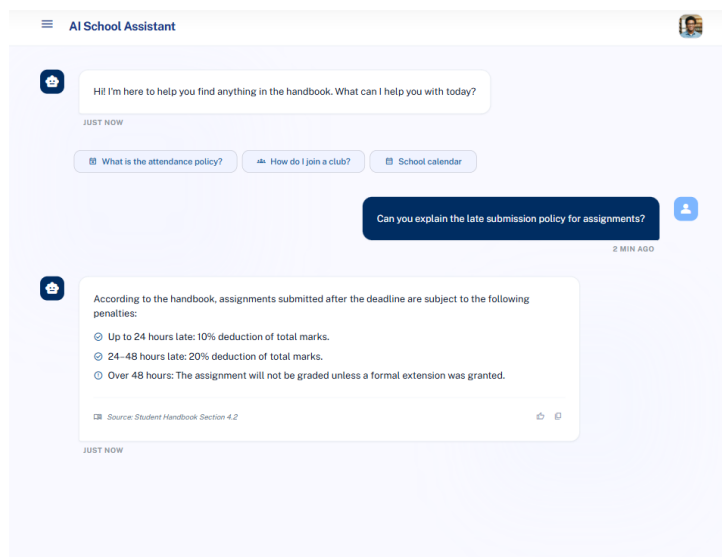

Figure 2: Enhanced prototype with AI assistant - Guides users to relevant content based on the family handbook.
